

01 // PROFESSIONAL SUMMARY

Founder & CEO of SubHero (SubVerse ecosystem) and Full-Stack Software Engineer with extensive experience architecting high-throughput fintech platforms, real-time distributed engines, and modular RESTful APIs. Specialized in engineering atomic financial ledgers, automated webhook billing systems, WebSockets, and asynchronous microservices using Python, Django, PostgreSQL, Redis, Celery, Docker, and HTMX. Track record of scaling digital products from concept to production with strict emphasis on financial data integrity, security, and low-latency performance.

02 // TECHNICAL SKILLS & ARCHITECTURE

03 // WORK EXPERIENCE & LEADERSHIP

- Founder, CEO & Lead Architect • SubHero (SubVerse Ecosystem)

2024 – Present

 - Founded and architected SubHero, a high-performance Nigerian VTU & digital services fintech platform facilitating automated airtime/data top-ups, utility bill payments, and SMM delivery.
 - Engineered an atomic, double-entry wallet ledger with PostgreSQL row-level locking (SELECT FOR UPDATE), dedicated virtual bank accounts, HMAC webhook verification, and zero-fee P2P transfers.
 - Implemented multi-layer security protocols including Argon2 transaction PIN hashing, Redis anti-brute-force rate limiting, and automated SMS OTP verification via Termii.
 - Directed technical strategy across the SubVerse product suite (SubHero, SubDoc, SubMart), managing Dockerized container pipelines and asynchronous Celery/Redis queue architectures.
- Full Stack Developer • Helix Mind Start-Up

2023 – 2024

 - Built and maintained scalable web apps and backend APIs utilizing Django, Python, JavaScript, and SQL.
 - Engineered RBAC authentication workflows, internal administrative dashboards, and responsive front-end tools.

04 // FEATURED ENGINEERING PROJECTS

SubHero (Fintech & VTU Engine)

Ecosystem ↗

Django • PostgreSQL • Redis • Celery • HTMX • Virtual Accounts

Scalable VTU & digital billing portal with automated wallet funding, zero-fee P2P transactions, Argon2 security, and low-latency asynchronous order dispatching.

The Truth Gate

Live Demo ↗ GitHub ↗

Django 5 • Channels • Redis • WebSockets • PostgreSQL • Paystack

Real-time counselling platform powered by WebSockets, sermon media catalog with advanced filtering, community moderation, and Paystack giving integrations.

Trade With Ariel

Live Demo ↗ GitHub ↗

Django • Python • Glassmorphic CSS • Vanilla JS • Render

High-conversion fintech portal with custom glassmorphism design and a bespoke Django CMS backend powering mentorship tiers, analytics, and offerings.

SubDoc (PDF-to-Word Engine)

Live Demo ↗ GitHub ↗

Flask • Python • Docker • Tesseract OCR • Google Cloud Run

Stateless, privacy-first document converter with Tesseract OCR fallback for scanned PDFs, drag-and-drop UI, and Cloud Run serverless deployment.

AU Voting & Election Platform

Live Demo ↗ GitHub ↗

Django • SQLite • Bootstrap 5 • Python • Vercel

Multi-candidate election portal with voter authentication, real-time ballot tallying, dynamic polling widgets, and tamper-resistant audit reports.

Django REST API & Admin CMS

Live Demo ↗ GitHub ↗

Django REST Framework • HTMX • SQLite • CSS • Render

Modular RESTful API ecosystem with Token authentication, granular permission scopes, CRUD endpoints, and reactive HTMX admin controls.

05 // EDUCATION & CERTIFICATIONS

Bachelor of Science (B.Sc.) in Computer Science

Undergraduate Program

In Progress

Certifications & Credentials

- Full Stack Development – Udemy
- Web Development Specialist – Programming Hub

06 // HONORS & ACHIEVEMENTS

4th Place – National Hackathon

Recognized for innovative problem-solving, rapid prototyping, and delivering clean, production-ready full-stack software.

Rapid Prototyping & Agile Commendation

Commended for agile feature delivery, sprint collaboration, and translating product specifications into functional codebases.
